# Voice recording and synthetic-voice consent

**Project:** Pehchaan, a voice-cloning fraud safeguard built for the RAKSHAM AI Cybersecurity Hackathon (IIT Delhi × Amazon), Round 1 and Grand Finale (24–25 October 2026).

I, _____ (full name), speaker ID `S0__`, agree to the following.

1. **Recording.** My team may record my voice reading the scripts in the Pehchaan recording kit, speaking freely, and on phone calls with consenting teammates.
2. **Synthetic copies.** My team may use AI voice-cloning and voice-conversion tools (open-source models and commercial APIs) to make synthetic copies of my voice.
3. **Purpose only.** The recordings and synthetic copies will be used **only** to train, test and demonstrate fraud-detection technology for this hackathon. Short clips may be played to judges and organisers during judging and demos.
4. **Not published.** My recordings, synthetic copies and any voice model built from them will **not** be publicly released, shared outside the team, or used to impersonate me to anyone without my knowledge.
5. **Third-party tools.** I understand that commercial voice APIs (for example Sarvam AI, OpenAI, Google, Deepgram) process audio under their own terms, and that only the recordings needed for cloning will be sent to them.
6. **Storage.** Files are kept on the team build laptop and in a private, encrypted cloud bucket that only the team can access.
7. **Deletion.** All my recordings, synthetic copies and voice models will be deleted by **31 December 2026**, or sooner if I ask. Metrics and charts computed from them, which contain no audio, may be kept.
8. **Withdrawal.** I can withdraw this consent at any time by telling the team. My data will then be deleted within 7 days and left out of any further training or demos.
9. **Role-play.** The scam lines in the scripts are fictional role-play. Saying them does not imply anything about me.

Signature: _____ Date: _ / _ / 2026

Mobile or email (for withdrawal requests): _____

*Team lead countersignature:* _____ Date: _ / _ / 2026
